My strategy  
is...

I disagree  
because...

I  
wonder...

I notice...

**Math Conversations is designed to help your students:**

**build number sense**

**become strategic and flexible thinkers**

**boost math confidence**

Two strategies are shown for adding  $354+211$ .

$$354+211$$

$$\begin{array}{r} 300+200 \\ 50+10 \\ 4+1 \end{array}$$

$$354+211$$

$$354 + 200 + 10 + 1$$

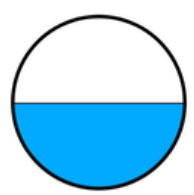

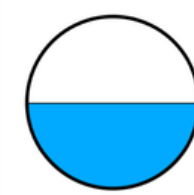

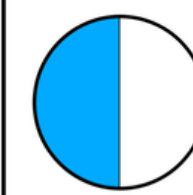

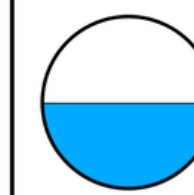

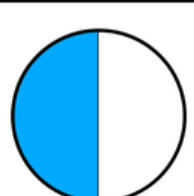

How are these strategies similar?  
How are these strategies different?  
Which do you prefer?

This resource includes **200 slides** that reinforce flexible and strategic thinking, connections, and much more. The main goal is to get you and your students talking about math and realizing that math is not all about right answers – it's about **thinking in different ways!**

How many do you see?

How do you see them? Are there different ways to see them?

©Shelley Gray www.ShelleyGrayTeaching.com

The slides are completely ready to go - **NO PREP!**

Just choose a slide and discuss as part of your daily math routine or number talk!

Here are the dots that were in each box.

What are some equations that this picture

How many?  
How do you see them?

Now how many? How do you see them?

Now how many? How do you see them?

What connections can you make between the three sets of dice?

How many do you see?

How do you see them?  
Compare your thinking  
with someone else's.

What do you notice? What do you wonder?

I notice...  
I wonder...

I absolutely love this resource!! What amazing mathematical conversations were sparked with the slides. My mathematicians loved sharing their ideas and encouraging others to share as well. This resource is a great fit for a morning activity to wake up our math brains or to conclude a math class. Excellent resource.

# Slides include number sense, geometry, estimation, and much more!

How many? How do you see them?

What addition or multiplication facts do you see modeled in this picture?

©Shelley Gray www.ShelleyGrayTeaching.com

Build the target number. Can you use more than one operation?

©Shelley Gray www.ShelleyGrayTeaching.com

What could this model represent?

	?	

If a 2-digit number fits in each space, what could the numbers be?

If a 3-digit number fits in each space, what could the numbers be?

©Shelley Gray [www.ShelleyGrayTeaching.com](http://www.ShelleyGrayTeaching.com)

“My students struggle with math anxiety. Incorporating these into the start of our lesson has helped them see that there is different ways of thinking.”

I am using this in my small group math stations. My students had a hard time with the fact that there isn't one specific answer I'm looking for, but they are starting to get the hang of it! I love seeing all the different strategies they use to solve the problems, and I've noticed that it's getting easier for them to explain their thinking!

I love how these incorporate different types of number talks but all in one place! We use a slide each day at the start of class and my students LOVE them. I also appreciate that these number talks provide entry points for ALL students, regardless of where they are at in their learning.
